

Typ: LAN

Connect EIB with LAN
(Internet)
Price without obligation.
1400€ (plus tax)
Art.-Nr.: 10103

also available as Powernet-
Device

Typ: LAN / ISDN

Connect EIB with LAN
(Internet) and Euro ISDN
Price without obligation.
2060€
Art.-Nr.: 10203
Discontinued Product

eibPort Features

Integrated Services and Functions

- logic arrays, scenes, timers...
- week-/year timers...
- threshold switch, comparator...
- facility coupling
- e-mail; WAP- access
- Integration of MP3- DVD- libraries with UpNP or macmyhome
- IR-connection via IRTrans
- programming via iETS
- MySQL database connection
- energy consumption logging with www.find-your-energie.de

Integrated Web-Visualisation

- access with standard-browser
- easy to use editor for creating the visualisation and configuring services
- integration von IP-cameras
- use prefab or free elements
- HomeInformationCenter fo PDA's and mobile phones
- UPnP Agent (Control Point)
- RSS Feeds

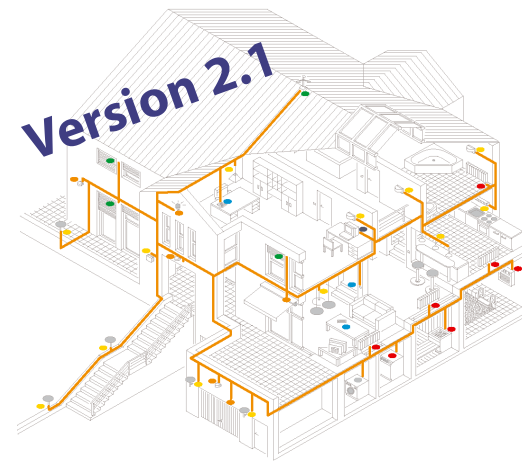

Other Features

- Remote programming, attendance and service via Internet
- device for rail mounting < 5 W
- address state table
- multi user visualisation, no license costs
- telegram memory

See for yourself: Visit www.bab-tec.de and test all functions live . Now!

Novelities

everywere at home

*... the gateway for all
communication channels*

Powerful Hardware

eibPort is now available with a new Motherboard equipped with **64/64 MB RAM/ROM**. Now even larger Projects with more sophisticated graphic designs are possible. The new ethernet controller allows data-transfer **up to 100 MBit** in the LAN. This leads in evidence to significant time saving, loading (for e.g.) the visualisation. Integration of Web-Start shortens the load time further on. All in all, load time is much reduced.

MacMyHome-Integration

With *eibPort* the integration of a Mac mini -as a streaming-client for multimedia - is very easy. The integrated xPL-Protokoll enables not only controlling the Squeezebox, it allows now embedding of the **macmyhome** application into the visualisation and also to EIB/KNX. Settlement of the highest claim controlling and managing your media-library.

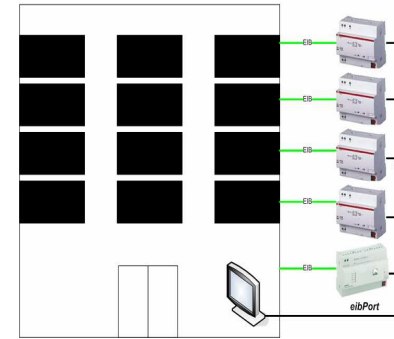

UPnP Agent

eibPort visualisation contains an **UPnP Control Point**. DLNA certified hard- and software (e.g. Twonky Media Server or ZyXEL UPnP Client) will be automatically identified and mounted. The mapping of audio-/video-server to the client (renderer) is easy and intuitive possible by the *eibPort* visualisation à la Plug and Play. Look for DLNA certified components under <http://www.dlna.org>.

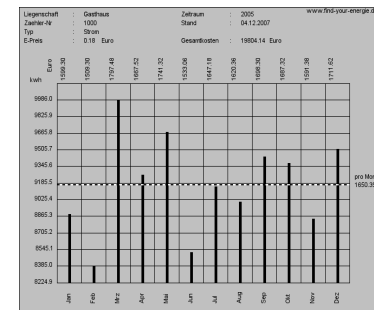

KNX/IP

eibPort is now capable of this protocol as well. If you are planning a facility with an ethernet backbone realised with **KNX/IP-Couplers** and you are also wishing an automation and visualisation, replace only one of these couplers with *eibPort*. This cheap method allows not only a license free visualisation over several terminals, but also timers, logical functions, scenes, mail function messages via e-mail etc. with minor work.

Find-your-Energie

This internet portal collects, analyses and **documents your energy** data. The data is sent from *eibPort* via e-mail to this server. No separate software is needed for analysing. With your standard internet-browser you can check week-, month- and year reports in a server generated image. By request, a backup of your data can be sent by e-mail to your address every week. Try it out: www.find-your-energie.de. Analysis for one consumption counter is for free.

HomeInformationCenter

Imagine controlling your EIB/KNX facility, retrieving media-data, or have access to your cameras with **iPod or iPhone** ? No problem with the HomeInformationCenter. Also working with the Windows **Media Center Edition** from Microsoft, the **PDA** (Windows mobile) or **Nokia mobile** (Symbian S60) and surly more devices in the future. All this in one unique look and feel.
